

## **Seasonal Lawn Care Guide**

*Where our passion grows your paradise*

### **Spring**

Spring is all about revival. Start by raking away dead grass and debris. Apply a balanced fertilizer to kick-start growth, and begin mowing regularly once the grass starts growing. It's also a great time for aeration and overseeding bare patches.

### **Summer**

In summer, your lawn needs regular mowing, but avoid cutting too short. Water deeply in the early morning if needed, and treat any emerging weeds. Watch for signs of drought stress and consider a high-nitrogen feed for vibrant growth.

### **Autumn**

Autumn is perfect for preparing your lawn for winter. Scarify to remove moss and thatch, aerate to improve drainage, and apply an autumn lawn feed. Overseed thin areas and keep mowing until growth slows.

### **Winter**

In winter, reduce foot traffic to avoid damaging the turf. Keep the lawn clear of leaves and debris. Avoid mowing unless absolutely necessary. Winter is a time for rest and protection - your spring lawn will thank you.
